

BIS Labels — Product Detail Page (PDP) Redesign

End-of-Day Development Progress & Next-Session Technical Handoff

Document Type:	Internal Development Progress & Checkpoint Report
Status:	In Progress (Intermediate Implementation — NOT Approved for Production Deployment)
Environment:	Local BigCommerce Stencil Theme Development (http://localhost:3000)
Target Store:	BIS Labels (https://www.bislabels.com)
Target Test Product:	1.5 Inch Diameter Thermal Transfer, 3 Inch Core
Date:	August 21, 2026
Theme Codebase:	Flexcart 4.9.1 (Cornerstone-derived BigCommerce Stencil Theme)
Active Branch:	feature/product-page-redesign (Commit 3100716)

1. Executive Progress Summary

Active development on the BIS Labels Product Detail Page (PDP) redesign was paused today at a clean, stable checkpoint. Over the course of the session, the storefront PDP underwent a significant visual and structural modernization to align with the approved creative direction.

Key Takeaways

- Substantial Visual Progress:** The legacy float-based product layout has been replaced with a high-converting, modern 2-column grid. Visual hierarchy, price presentation, quantity steppers, primary Add to Cart CTA, secondary expert consultation, trust badges, and specification cards are now in place.
- Zero Catalog Modification:** All work was executed strictly within local BigCommerce Stencil templates and SCSS stylesheets. No live store settings, catalog records, variants, SKUs, inventory, prices, or custom fields were altered.
- Intermediate Status:** While key design and responsive objectives were met, the implementation is **not production-ready**. Critical investigations regarding catalog modeling (sibling product navigation vs. native variants) and standard product information tabs (SKU, weight, reviews, full description) must be completed before deployment.

2. What Was Completed Today

The following items were implemented and verified on the local storefront:

1. **Two-Column Responsive Grid:** Replaced the legacy Cornerstone float structure with a responsive CSS grid (`.bis-pdp-main-grid`) establishing a 46%/54% media-to-purchase column ratio.
 2. **Breadcrumb Cleanup:** Eliminated the redundant category `h1` band rendered by `breadcrumbs.html` , leaving a clean, single-line navigational breadcrumb trail.
 3. **Gallery Aspect Ratio Fix:** Removed the hardcoded `120%` padding box override that caused massive empty white space, properly centering the diagram image within a bordered white card container with a top-left `SALE` badge.
 4. **Single-Image Guard:** Added a conditional guard (`{{#gt product.images.length 1}}`) to suppress orphaned carousel slider markup when only one product image exists.
 5. **Brand Tagline Integration:** Added the supporting brand copy (`"Reliable. Durable. Built for High-Volume Printing."`) beneath the product title.
 6. **Price & Savings Hierarchy:** Implemented clean active pricing (`$52.95 / CASE`), strikethrough MSRP (`$69.44`), and savings pill badge (`SAVE $16.49`).
 7. **Curated Quick Specs Bar:** Built a structured quick-specs row pulling physical product dimensions (`Label Width` , `Core Size` , `Labels Per Roll` , `Labels Per Case`) while filtering out redundant pricing and backend flags.
 8. **Purchase Controls:** Implemented custom quantity increment/decrement buttons (`- 1 +`), high-contrast red `ADD TO CART` CTA with cart icon, and secondary `NEED HELP CHOOSING? TALK TO AN EXPERT` callout.
 9. **Trust & Reassurance Strip:** Added a 4-item horizontal trust section (`Fast, Reliable Shipping` , `Expert Label Support` , `High-Volume Fulfillment` , `30+ Years of Experience`) with red outline iconography.
 10. **Product Specifications Grid:** Created a balanced 4-column responsive grid (4x2 on desktop, 2x4 on tablet) rendering structured product custom fields with circular red icon badges titled `"Built for Reliable Thermal Transfer Printing"` .
 11. **Scoped SCSS Architecture:** Enclosed all styling within `.productView.bis-pdp` to prevent style leaks or regressions into Quick View modals and other storefront layouts.
-

3. Before vs. Current Implementation State

Element	Baseline / Before State	Current Local Redesign State
Grid Layout	Legacy float-based columns; 50/50 split with awkward whitespace	Scoped 2-column flex/grid (<code>.bis-pdp-main-grid</code>)
Breadcrumbs	Redundant gray band with duplicate <code>h1</code> title above trail	Single clean breadcrumb path; duplicate heading hidden
Product Media	684px height container causing small diagram to appear detached	Constrained, auto-scaling image card with top-left <code>SALE</code> badge
Thumbnails	Broken single-slide slick slider strip underneath diagram	Suppressed when 1 image; slick configured for multi-image
Title & Subtitle	Standard lowercase/mixed font; no brand subtitle	Bold uppercase heading + <code>"Reliable. Durable. Built for High-Volume Printing."</code>
Pricing Block	Standard Stencil price list (<code>Was:</code> , <code>Now:</code>)	Primary price per case + strikethrough comparison + <code>SAVE \$X</code> pill
Specs Presentation	Buried in long standard definition list (<code></code>)	Dual-layer: Top Quick Specs bar + Bottom 4-column Spec Cards
Purchase Actions	Generic grey quantity stepper and standard button	Custom stepper (<code>- 1 +</code>) + prominent red Add to Cart CTA
Reassurance	None present on PDP	4-column trust strip with dedicated SVG iconography
Option Selector	Standard dropdowns	Cleaned option wrappers (see architecture analysis below)

4. Current PDP Data & Custom Field Mapping

The target product (`1.5 Inch Diameter Thermal Transfer, 3 Inch Core`) contains 8 active custom field entries in BigCommerce:

Displayed Spec	Raw Field Value	Field Name in Catalog	Structured?	Source Layer	Display Location in Redesign
Label Width	1.5 Diam. Circle Inch	Label Width	Yes	product.custom_fields	Quick Specs + Spec Cards
Core Size	3 Inch	Core Size	Yes	product.custom_fields	Quick Specs + Spec Cards
Labels Per Roll	1000	Labels Per Roll	Yes	product.custom_fields	Quick Specs + Spec Cards
Labels Per Case	4000	Labels Per Case	Yes	product.custom_fields	Quick Specs + Spec Cards
Price Per Roll	\$13.24	Price Per Roll	Yes	product.custom_fields	Spec Cards only (filtered from top)
Price Per Case	\$52.95	Price Per Case	Yes	product.custom_fields	Spec Cards only (filtered from top)
Product Type	Thermal Transfer	Product Type	Yes	product.custom_fields	Spec Cards only (filtered from top)
Labels Across	1	Labels Across	Yes	product.custom_fields	Spec Cards only (filtered from top)

5. Outstanding Investigation: Original PDP Information Flow

Investigation Findings

In the baseline Flexcart theme (`templates/components/products/product-view.html` at commit `64e184d`):

1. Product Information

: The original definition list contained SKU, UPC, Weight, Shipping, and Custom Fields. In the redesign, this was set to `style="display:none;"` to prevent visual clutter while preserving critical JavaScript data hooks (`data-product-sku` , `data-product-weight`).

2. **Product Description & Tabs:** In the baseline theme, `theme_settings.show_product_details_tabs` (`true`) triggered rendering tabs for Description, Reviews, Warranty, and Videos. During the redesign refactor, the tab container was replaced with a direct output of `{{{product.description}}}` placed below the feature cards.

3. **Empty / Short Descriptions:** For the test product, `product.description` contains only one plain-text sentence: `"Thermal Transfer, 3 Inch Core, 1000 labels Per Roll, 4 Rolls Per Case, 4000 labels Per Case"` . It lacked rich editorial HTML or warranty copy.

4. **Reviews:** The star ratings snippet () and review submission link were omitted from the hero section during the initial grid restructuring.

Recommendation for Next Session

Restore a clean secondary information accordion or tabbed container below the feature cards that houses:

- Full Technical Specifications (SKU, UPC, Weight, Shipping terms)
- Detailed Product Description & Application Guidelines
- Product Reviews ([Write a Review](#) & star rating summaries)
- Compatibility / Ribbon Pairing Guides

6. Catalog Modeling & Size Selector Architecture

Core Question

Can the approved size-selection experience likely be achieved while keeping the current BIS Labels catalog structure unchanged?

Answer: YES — Via Frontend Sibling Product Navigation (Option 2)

Detailed Technical Findings

1. **How BIS Labels Currently Models Products (Model B — Separate Standalone Products):**
2. In the BIS Labels catalog, each dimension combination (e.g., `1.5" Diameter 3" Core` , `2" Diameter 3" Core` , `3" Diameter 3" Core`) is a **distinct standalone product record** with its own product ID, URL, SKU, and metadata.
3. There are **no native BigCommerce parent-child variant option sets** (`product.options` array is empty for these products).
4. Because no native options exist, Stencil's `dynamicComponent 'components/products/options'` correctly outputs nothing.

1. Feasibility Assessment of Implementation Options:

Strategy	Feasibility	Catalog Risk	Technical Effort	Next Session Recommendation
Option 1: Native BigCommerce Variants	Not Possible Currently	High	Very High	Cannot be used without rebuilding the entire product catalog in BigCommerce backend.
Option 2: Frontend Sibling Product Selector	High (Recommended)	Zero (Read-Only)	Moderate	Derive sibling sizes within the same category/family using storefront GraphQL or category metadata. When a customer selects a size, navigate directly to that product's URL.
Option 3: Full Catalog Restructuring	Low	High	Extreme	Consolidating standalone SKUs into multi-variant parent products would disrupt existing indexing, URLs, order history, and feed integrations.

7. Component Inventory & Status Comparison

Original Storefront Component	Current Implementation Status	Technical Location / Notes
Product Title	PRESENT & REDESIGNED	<code>templates/components/products/product-view.html</code>
Active Price	PRESENT & REDESIGNED	<code>templates/components/products/price.html</code> (<code>.bis-price-val</code>)
MSRP / Compare Price	PRESENT & REDESIGNED	<code>templates/components/products/price.html</code> (<code>.bis-price-strike</code>)
Savings Badge	PRESENT & REDESIGNED	<code>templates/components/products/price.html</code> (<code>.bis-price-save-badge</code>)
Quantity Stepper	PRESENT & REDESIGNED	<code>templates/components/products/add-to-cart.html</code> (<code>.bis-qty-stepper</code>)
Add to Cart CTA	PRESENT & REDESIGNED	<code>templates/components/products/add-to-cart.html</code> (<code>.bis-btn-add-cart</code>)
Wishlist Link	PRESENT (RELOCATED)	Styled as subtle secondary link below purchase panel
Main Image Gallery	PRESENT & REDESIGNED	<code>templates/components/products/product-view.html</code> (<code>.bis-pdp-main-image</code>)
Thumbnails Carousel	PRESENT (CONDITIONAL)	Hidden when image count <= 1; active for multi-image products
Quick Specs Bar	NEWLY IMPLEMENTED	Derived dynamically from <code>product.custom_fields</code>
Trust Reassurance Strip	NEWLY IMPLEMENTED	4-column reassurance strip with custom SVGs
Feature / Spec Cards	NEWLY IMPLEMENTED	4-column structured specification cards
SKU / Weight / Shipping	HIDDEN (HOOKS INTACT)	Retained in DOM for JS; needs secondary display block
Product Reviews / Rating	TEMPORARILY OMITTED	Needs reinstatement in secondary information area
Social Sharing Icons	OMITTED	Low-priority component omitted from hero
Related Products Grid	PRESENT	Flexcart standard carousel rendered at base of page

8. Storefront Functional Test Matrix

Tested locally on `http://localhost:3000/1-5-inch-diameter-thermal-transfer-3-inch-core/` :

Functional Check	Status	Verification Notes
Price Rendering	PASS	Formatted <code>\$52.95 / CASE</code> renders with tax/unit metadata intact.
MSRP Comparison	PASS	Strike-through <code>\$69.44</code> renders conditionally when MSRP > Price.
Savings Calculation	PASS	Badge displays <code>SAVE \$16.49</code> correctly.
Quantity Increment (+)	PASS	Step button increments value from 1 to 2; bounds checked.
Quantity Decrement (-)	PASS	Step button decrements value back to minimum purchase qty (1).
Manual Quantity Typing	PASS	Input field accepts numeric keyboard entry.
Add to Cart Submission	PASS	Form submits payload (<code>product_id: 114</code> , <code>qty: 2</code>) successfully.
Cart Page Verification	PASS	Verified on <code>/cart.php</code> : 2 units @ \$52.95 = \$105.90 subtotal / total .
Talk to Expert CTA	PASS	<code>tel:+15137725252</code> opens dialer / call intent.
Wishlist Trigger	PASS	Wishlist dropdown interaction preserved.
Related Products	PASS	Bottom product grid loads and renders correctly.
Console Errors	PASS	No fatal JavaScript errors or broken module exports in console.

9. Responsive Viewport Status

Viewport Width	Device Target	Status	Observations & Notes
1440px	Standard Desktop	GOOD	Clean 2-column grid; balanced proportions; 4-column spec cards.
1024px	Tablet Landscape	GOOD	Grid maintains structure; padding scales appropriately.
768px	Tablet Portrait	GOOD	Layout reflows gracefully; spec cards adapt to 2-column grid.
430px	Mobile Large (iPhone 14/15 Pro Max)	ACCEPTABLE	Hero stacks vertically; full-width Add to Cart CTA; minor spacing polish needed.
375px	Mobile Standard (iPhone SE / Mini)	ACCEPTABLE	No horizontal scrolling or overflow; quick specs stack neatly.

10. Repository Modifications & Developer Handoff

Git Commit Details

- **Active Branch:** `feature/product-page-redesign`
- **Commit SHA:** `3100716`
- **Message:** `feat(pdp): redesign product detail page layout, gallery, and specs to match approved design`

Modified Source Files

1. `assets/scss/layouts/products/_productView.scss`
 2. *Purpose:* Primary stylesheet for PDP layout, typography, grid, buttons, trust badges, and spec cards.
 3. *Implementation:* Completely scoped under `.productView.bis-pdp` to prevent regressions in non-PDP contexts.
 4. `templates/components/products/product-view.html`
 5. *Purpose:* Main BigCommerce product template.
 6. *Implementation:* Reorganized into `.bis-pdp-main-grid`, added quick specs, trust strip, specification cards, and preserved all BigCommerce JS attributes (`data-event-type`, `data-entity-id`, `data-cart-item-add`).
 7. `templates/components/products/price.html`
 8. *Purpose:* Pricing component partial.
 9. *Implementation:* Redesigned price layout (`.bis-price-row`) supporting MSRP comparison, savings badge, unit labels (`/ CASE`), and microdata schemas.
 10. `templates/components/products/add-to-cart.html`
 11. *Purpose:* Quantity stepper and add-to-cart submission partial.
 12. *Implementation:* Redesigned button with cart SVG, integrated quantity steppers (`data-quantity-change`), and preserved alert boxes.
 13. `templates/components/products/options/set-select.html`
 14. *Purpose:* Select option dropdown styling.
 15. *Implementation:* Custom styled select with chevron icon and placeholder text.
 16. `templates/components/products/options/set-rectangle.html`
 17. *Purpose:* Rectangular button option swatch partial.
 18. *Implementation:* Modern pill buttons with checkmark state.
 19. `templates/components/products/options/set-radio.html` & `swatch.html`
 20. *Purpose:* Radio and color swatch option partials.
 21. *Implementation:* Cleaned modern option controls.
 22. `.gitignore`
 23. *Purpose:* Repository exclusion rules.
 24. *Implementation:* Added exclusions for local cache, `reports/`, `.agents/`, and `skills-lock.json`.
-

11. Catalog & Production Safety Verification

Safety Check	Verified Status
Product records modified in BigCommerce	NO
Variant configurations altered	NO
Pricing or MSRP rules changed	NO
SKUs or Inventory counts touched	NO
Custom fields altered or removed	NO
Product images deleted or replaced in catalog	NO
Dependencies added (<code>package.json</code>)	NO
Production storefront modified	NO

12. Known Technical Risks & Open Questions

- Product Photography vs. Technical Diagrams:** The live product catalog utilizes technical dimension drawings for many SKUs rather than 3D rendered product photographs. The frontend CSS handles these gracefully, but merchandising imagery quality is a separate business consideration.
- Cross-Product Custom Field Consistency:** Different product categories (e.g., Ribbons vs. Direct Thermal Labels) may contain different custom field naming conventions (`Roll Length` vs. `Labels Per Roll`). The template should continue utilizing defensive fallback logic.
- Trust Claims Verification:** Claims such as `"30+ Years of Experience"` and `"Nationwide Delivery"` are standard BIS Labels brand claims, but should receive formal marketing sign-off prior to production deployment.

13. Recommended Next Session Priorities

graph TD

A[Priority 1: Reinstate Secondary Information Tabs] --> B[Priority 2: Implement Sibling Product Size Selector]

B --> C[Priority 3: Final Information Hierarchy Polish]

C --> D[Priority 4: Mobile & Cross-Category Testing]

D --> E[Priority 5: Staging Regression Validation]

Priority 1: Reinstate Full Product Information Area

Rebuild a clean, modern secondary information section below the specification cards to restore SKU, weight, shipping policies, customer reviews, and complete product descriptions without cluttering the hero section.

Priority 2: Implement Sibling Product Size Selector

Build the `"Choose Size (Diameter)"` selector as a frontend sibling product navigation control linking related standalone SKUs, achieving 100% design fidelity without altering the BigCommerce catalog architecture.

Priority 3: Final Information Hierarchy Polish

Refine the boundary between:

- **Hero Quick Specs:** 2–4 immediate buying triggers (e.g., Core Size, Labels/Roll, Labels/Case).
- **Specification Cards:** 4–8 technical characteristics.
- **Deep Technical Details:** Full tabular data and warranty/shipping policies.

Priority 4: Cross-Category Validation

Validate the template against other product types (Direct Thermal rolls, Fanfold labels, Thermal Transfer Ribbons) to ensure consistent rendering across the entire catalog.

14. Concrete Technical Starting Point for Next Session

To resume development in the next session:

1. **Verify Local Development Server:** Ensure Stencil is active on `http://localhost:3000`.
2. **Inspect Pre-Redesign Information Partial:** Open `templates/components/products/description.html` and `templates/components/products/description-tabs.html`.
3. **Construct Secondary Info Block:** In `templates/components/products/product-view.html`, insert a structured tabbed/accordion component beneath `.bis-feature-section` that renders SKU, Weight, Full Description, and `components/products/reviews`.
4. **Implement Sibling Size Navigation:** Query category sibling products via the Storefront API or Handlebars category context to populate the `Choose Size` selector.
