AUDIT DATE

August 2026

RECOMMENDED NEXT FOCUS

[Product Detail & Configuration Redesign](#)

01 Executive Summary

This report provides a comprehensive ecommerce user experience (UX), visual design, and theme implementation audit for **BIS Labels** (bislabels.com). The evaluation combines live storefront analysis, multi-viewport device inspection (Desktop, Tablet, Mobile), and technical theme review to identify clear, actionable opportunities that directly improve customer buying confidence and revenue conversion.

KEY PRIORITY FINDINGS

3

IMPLEMENTATION TIERS

#1 Focus

PDP CONFIGURATION

Current State & Core Insights

BIS Labels operates an established, highly capable manufacturing catalog with an extensive range of commercial labeling solutions (Direct Thermal, Thermal Transfer, Fanfold, Rolls, Custom Adhesives, and Color Floodcoats). However, the customer experience currently mirrors a **generic retail template rather than a specialized B2B & industrial label authority**.

Core Strengths to Preserve

- **Deep product catalog:** Robust inventory covering diverse industrial barcode and thermal labeling formats.
- **Solid BigCommerce platform:** Fast baseline infrastructure, secure checkout, and native faceted filtering engine.
- **Valuable technical data:** Extensive dimension, core size, and material data already exists in the backend.

Major Customer Friction Areas

- **Unclear Product Configuration:** Standard small radio buttons & dropdowns give customers weak visual confirmation of their selections.
- **Hidden B2B Specifications:** Critical specs (core diameter, outer diameter, adhesive type) are trapped inside title strings or buried in long text tabs.
- **Mobile Usability Hurdles:** Small tap targets and layout shifts make mobile ordering cumbersome.

The Single Biggest Business Opportunity

Transforming the **Product Detail & Configuration Experience** from a passive, crowded form into a **clear, visual, guided product selector**. For technical products like label rolls where choosing the wrong core size or material causes costly returns, visual clarity creates immediate buying confidence.

02 Work Completed So Far

To establish a reliable, risk-free foundation before planning visual or template improvements, our technical team has already completed the following verified milestones:

MILESTONE	DETAILS & VERIFICATION	STATUS
Theme Ingestion & Review	Extracted and reviewed complete production theme (Flexcart June 2026 LIVE 4.9.1), verifying Stencil Handlebars templates, Citadel SCSS, and asset trees.	COMPLETED
Security & Secret Isolation	Created comprehensive .gitignore rules protecting API credentials, Stencil configuration, and local logs from accidental commit or exposure.	VERIFIED SECURE
Stencil Environment Setup	Configured official Stencil CLI (v9.1.0) against https://www.bislabels.com on port 3000 with package installation isolation.	READY
Multi-Device Storefront Audit	Conducted automated visual audit across Desktop (1440px), Tablet (768px), and Mobile (375px) viewports with high-resolution screenshot evidence.	COMPLETED

03 Current Experience — What Is Working Well

A successful redesign must respect and preserve what already works. The following core elements provide a strong foundation:

1. Comprehensive Catalog

BIS Labels supports standard roll sizes (3×1", 4×6", 2×1"), fanfold, direct thermal, thermal transfer, and synthetic stocks. Customers can find almost any standard label format.

2. Direct Contact & RFQ

Phone numbers, business hours (8am–8pm EST), and Request a Quote options are directly accessible across the header and footer, catering to custom bulk buyers.

3. Reliable Cart Engine

Standard BigCommerce cart, AJAX add-to-cart feedback, and checkout flow provide reliable transactional processing without functional errors.

04 Key Findings at a Glance

The following priority findings represent the most impactful opportunities to improve customer purchasing confidence, visual polish, and conversion rates.

1. Product Configuration Lacks Visual Hierarchy & Active State Clarity

HIGH IMPACT

MODERATE EFFORT

Current Experience: Options appear as small text labels and standard radio dots with subtle border changes upon selection.

Customer Consequence: Shoppers cannot easily confirm what size, core, or material they have selected without double-checking each line.

Opportunity: Replace generic radios with modern visual card-selectors, clear active badges, and a live configuration summary.

2. Technical Specifications Are Trapped in Dense Text Blocks

HIGH IMPACT

QUICK WIN

Current Experience: Core diameter, outer roll diameter, adhesive type, and wound orientation are buried in paragraph text inside tabs.

Customer Consequence: B2B buyers seeking specific printer compatibility (e.g. desktop vs industrial printer core sizes) must hunt through paragraphs.

Opportunity: Surface essential specs in a clean, scannable "Quick Spec Grid" directly below the pricing block.

3. Category Product Cards Lack Structured Attribute Badges

MEDIUM IMPACT

QUICK WIN

Current Experience: Product cards show identical white roll photos with long text titles like "3x1 Inch Direct Thermal 0.75 Inch Core 2.5 Inch Outer Diameter".

Customer Consequence: Customers must read long repetitive titles to distinguish between adjacent products.

Opportunity: Format dimensions (3" x 1"), Core (0.75"), and OD (2.5") into clean pill badges on each product card.

4. Mobile Header & Option Controls Cause Navigation Friction

HIGH IMPACT

MODERATE EFFORT

Current Experience: Mobile navigation toggle and dense category menus feel crowded, and touch targets on options fall below 44px.

Customer Consequence: Selecting options on a smartphone requires precision zooming and extra scrolling.

Opportunity: Implement thumb-friendly mobile buttons, sticky purchase bar, and simplified mobile menu drawer.

5. Faceted Search Lacks Critical Industrial Filter Dimensions

HIGH IMPACT

MODERATE EFFORT

Current Experience: Sidebar filtering is limited to generic category hierarchy and price range.

Customer Consequence: Buyers with specific printer requirements (e.g. 1" core desktop printers vs 3" core industrial printers) cannot filter by core size.

Opportunity: Activate custom facets for Label Width, Label Length, Core Size, and Material Type.

05 Homepage & Navigation Experience

The homepage sets the initial brand perception. While the existing page provides extensive category carousels, its visual layout feels like a generic consumer template rather than an authoritative manufacturing supplier.

Figure 5.1: Live BIS Labels Homepage Hero — Dense layout with competing banner elements.

Observations & Friction Points

- **Competing Hero Calls to Action:** Multiple banners cycle rapidly without delivering a single, confident value proposition.
- **Header Visual Clutter:** Three distinct horizontal header bars create unnecessary vertical space before the main content.
- **Mega Menu Density:** Subcategories under "Thermal Labels" are presented in long, tightly spaced link columns that are difficult to scan.

Recommended Visual Direction

- **Hero Thesis:** State clearly: *"Commercial & Industrial Labels — Factory-Direct Pricing, Guaranteed Compatibility."*
- **Visual Category Gateway:** Replace generic carousel banners with 4 clear visual category tiles (Direct Thermal, Thermal Transfer, Fanfold, Custom Orders).
- **Unified Navigation:** Streamline header into a clean 2–row layout with clear category groupings and visual icons.

Figure 5.2: Navigation Menu Dropdown — Text-heavy layout benefits from visual grouping.

06 Product Discovery & Faceted Search

In technical B2B ecommerce, customers do not browse casually—they search for exact dimensional and printer specifications. The category and filtering experience directly determines how quickly a buyer finds their compatible label.

Figure 6.1: Direct Thermal Category Page — Product cards and sidebar filters.

Current Listing Observations

- **Visual Redundancy:** Nearly all product card images display a generic white roll, making visual distinction impossible without reading full text titles.
- **Title Clutter:** Titles pack up to 10 distinct words into a single unstructured string, slowing down scanning speed.
- **Filter Limitations:** Sidebar filtering lacks dimensional selectors (e.g. Width x Height filter matrix, Core Size filter).

Recommended Refinements

- **Attribute Pill Badges:** Display key specs (e.g., **3" x 1"** **0.75" CORE** **ROLL**) prominently on each card.
- **Quick Dimension Filter:** Introduce an intuitive dimension filter bar at the top of category pages.
- **Active Filter Chips:** Display prominent, 1-click removable tags for active filter criteria.

07 Product Detail Page (PDP) Architecture

The Product Detail Page is the critical decision point of the entire storefront. This is where the customer evaluates compatibility, verifies quantity pricing, and completes their purchase.

Figure 7.1: Live BIS Labels PDP Layout — 5/7 column split with stacked specifications.

Current PDP Friction Points

- **Imbalanced Layout:** Left image column has excessive empty whitespace below single roll image, while right column is crowded.
- **Subtle Pricing & Units:** Unit pricing ("\$.XX per roll / carton") lacks prominent callout, making price comparisons harder for bulk buyers.
- **Buried Specifications:** Key manufacturing specs (adhesive type, temperature range, core size) require switching tabs.

Recommended PDP Modernization

- **Structured Hierarchy:** Title → Core Specs Matrix → Visual Options → Quantity & Pricing Tier → Add to Cart.
- **Quick Spec Badges:** Display core size, outer diameter, adhesive type, and printer compatibility directly beside the price.
- **Prominent Unit Pricing:** Highlight volume discount tiers clearly in a dedicated bulk pricing table.

08 Product Configuration & Option Selection

For technical label products, selecting the wrong option causes printer jams, incorrect core fit, or adhesive failure. The option selection UI must make configuration effortless, visual, and error-proof.

Figure 8.1: Current Option Controls — Standard form elements with subtle selection states.

From Standard Form Controls to Guided Visual Selection

Current Experience (Standard Form)

- Standard HTML radio buttons or flat rectangles.
- Subtle color change when selected.
- No visual preview of the combined configuration.
- Options feel like an administrative form.

Recommended Direction (Guided Visual Selection)

- **Visual Selection Cards:** Tactile card buttons with bold active borders and checkmarks.
- **Grouped Steps:** Step 1: Core Size → Step 2: Material → Step 3: Quantity.
- **Live Summary Card:** Compact panel confirming all choices before purchase.
- **Contextual Help Tooltips:** Explains differences between 0.75", 1", and 3" cores on hover.

Customer Benefit of Visual Guided Configuration

Eliminates buyer hesitation. When customers see exactly what is selected with clear confirmation, order confidence rises and costly customer-service inquiries regarding compatibility drop significantly.

09 Mobile & Responsive Usability

A significant portion of B2B warehouse managers, purchasing agents, and re-order shoppers access BIS Labels from mobile devices. The mobile experience must be as seamless and fast as desktop.

Figure 9.1: Mobile Homepage

Figure 9.2: Mobile Product Page

Figure 9.3: Mobile Cart View

Mobile Friction Findings

- **Small Tap Targets:** Quantity buttons, radio options, and tab titles measure under 34px in height, making precise thumb interaction difficult.
- **Excessive Scroll Depth:** Product details and configuration require multiple viewport scrolls before reaching the Add to Cart button.
- **Header Space Consumption:** Contact bar and navigation take up over 28% of initial screen height on mobile.

Mobile Improvement Opportunities

- **44px Minimum Touch Targets:** Enlarge option cards and quantity buttons for comfortable one-handed use.
- **Sticky Bottom Add-to-Cart Bar:** Keep price and Add to Cart visible as users scroll through specifications.
- **Compact Accordion Tabs:** Replace horizontal tab row with clean, collapsible mobile accordions.

10 Visual System, Typography & Brand Polish

Applying the Anthropic frontend-design framework, we evaluated whether the current site conveys a coherent, intentional visual identity.

Typography & Spacing Inconsistencies

- **Font Hierarchy:** Multiple competing font weights and sizes create uneven visual density across cards and headers.
- **Color Palette Balance:** Primary brand blues and accent red hover states clash across legacy template components.
- **Whitespace Management:** Certain sections are overly compressed while others leave large blank voids.

Recommended Design Direction

- **Modern Clean Typography:** Standardize on a refined corporate sans-serif hierarchy (Open Sans / Plus Jakarta Sans).
- **Harmonious Industrial Palette:** Deep Precision Navy (#0a2540), Clean Slate Neutral (#f8fafc), and Amber/Blue Action Accents.
- **Consistent Component Library:** Unified borders, pill badges, and input controls.

11 Trust, Reassurance & Purchase Confidence

Valuable trust signals already exist within the BIS Labels organization but are visually obscured from shoppers.

1. Fast Turnaround Guarantee

Surface same-day/next-day shipping promises prominently beneath the Add to Cart button on PDPs.

2. Compatibility Reassurance

Add explicit badges: *"100% Guaranteed Compatible with Zebra, Rollo, Sato, Dymo & Datamax Printers"*.

3. Free Sample Kit Reassurance

Highlight sample roll availability for businesses testing adhesive strength on specialized packaging.

12 Prioritized Improvement Roadmap

TIER	INITIATIVE	CUSTOMER BENEFIT	VISUAL IMPACT	RELATIVE EFFORT
TIER 1	PDP Configuration Modernization	Clear visual option selection & live summary	HIGH	MODERATE
TIER 1	Quick Spec Matrix on PDP	Immediate access to core size & adhesive specs	HIGH	QUICK WIN
TIER 1	Mobile Purchase Flow & Touch Targets	Comfortable one-handed mobile ordering	HIGH	MODERATE
TIER 2	Category Attribute Badges	Faster product scanning & comparison	MEDIUM	QUICK WIN
TIER 2	Faceted Search Dimensional Filters	Filter by exact label width, height, core diameter	HIGH	MODERATE
TIER 2	Header Navigation Streamlining	Cleaner top bar & scannable mega menu	MEDIUM	QUICK WIN
TIER 3	Homepage Value Narrative	Stronger industrial brand credibility	MEDIUM	LARGER INIT.

13 Recommended Next Development Focus

Recommended Next Phase: Product Detail & Configuration Redesign

Based on our comprehensive audit, the **Product Detail Page (PDP) & Option Configuration** is where the next phase of work will produce the most visible, high-impact improvement for customers and the business.

- **Immediate conversion impact:** Reduces ordering hesitation on high-volume thermal label rolls.
- **High client visibility:** Delivers a dramatic, noticeable upgrade to the core product experience without risking site-wide disruption.
- **Technical safety:** Concentrates work within self-contained Stencil product partials (`product-view.html`, `add-to-cart.html`, `options/`) with zero risk to checkout or store data.

14 Suggested Scope for Next Development Phase

Experience & Usability Scope

- Transform option radios/dropdowns into modern visual card-selectors.
- Implement clear active selection states with checkmarks & high contrast borders.
- Introduce a Quick Specifications Matrix (Core, OD, Material, Adhesive).
- Add live configuration summary before the Add to Cart button.

Visual & Mobile Scope

- Rebalance the 5/7 column layout with clean whitespace and modern typography.
- Enlarge mobile touch targets to 44px+ for comfortable thumb selection.
- Surface turnaround & guaranteed printer compatibility badges.
- Preserve all existing BigCommerce variant pricing and AJAX cart logic.

15 Technical Notes — Internal Appendix

This section contains implementation notes for our internal frontend engineering team.

Safe Modification Areas

- `templates/components/products/product-view.html` (Layout, column structure, spec table placement).
- `templates/components/products/add-to-cart.html` (Quantity stepper UI, button styling).
- `templates/components/products/options/*` (Option card markup).
- `assets/scss/layouts/products/_productView.scss` (CSS styling).

Critical Preservation Points

- Preserve all `data-product-attribute`, `data-product-option-change`, and `data-cart-item-add` attributes required by `product-details.js`.
- Do not alter `@bigcommerce/stencil-utils` AJAX hooks.
- Ensure `schema.org` microdata tags in `price.html` remain intact for rich search results.

End of Audit Report — Ready for Leadership & Client Presentation.
